

GAC water filters replacement cartridges manufacturer

About GAC water filters replacement cartridges

GAC-Series water filter cartridge is designed for effective reduction of unwanted taste and odor, such as chlorine. They are engineered to allow water to enter one end and pass through to be in contact with the carbon for a maximum length of time, ensuring maximum absorption. An internal expansion pad is added to minimize channeling or bypass. A nominal 20 micron non-woven post filter is incorporated to reduce carbon fines and other suspended particles. GAC-Series cartridge contains coconut shell based, nut shell based or coal shell base activated carbon which is highly effective at reducing certain organic chemicals such as EDB, TCE and THM, in addition to reducing chlorine.

FEATURES	<ul style="list-style-type: none">• R.O / Drinking water purification system• Cooling tower treatment• Color removal• Beverages
APPLICATIONS	<ul style="list-style-type: none">• R.O / Drinking water purification system• Water purification• Color removal• Beverages• Cooling tower treatment
TEMPERATURE	<ul style="list-style-type: none">• 40°C to 60°C
SPECIFICATION	<ul style="list-style-type: none">• See model type(Form A)
