

Reverse Osmosis Membranes,Reverse Osmosis Water Filters,Osmosis Membranes manufacturer

Reverse osmosis membranes is used widely for brackish water desalination. The brackish water RO membrane is especially more effective when the feed water is within 10,000 ppm of concentration. Because it has high performance rate and chemical persistence, it can be used for a variety of purposes. It is used in producing drinking water, industrial water, pharmaceutical water, waste water treatment and concentration of food/medicine.

Domestic Reverse Osmosis membrane is the answer to acquiring fresh & clean water. Reverse Osmosis(RO) membrane removes most of chemical & biological contaminants.

There are many famous brands for option: such as the FILMTEC,CSM,FCS,VONTRON. According the water output capacity,the different membrane is available as follows:36GPD,50GPD,75GPD,100GPD.
