

## water dispenser,water cooler dispenser manufacturer

Bottleless Water Coolers System are Advanced, attractive and durable.

Water travels through multi stages of filtration:

### 1. SEDIMENT WATER FILTER

This filter is for use to remove rust, dirt and granular impurities in water, and reduces the turbidity of water

### 2. ACTIVATED CARBON WATER FILTER

This filter is for use to remove tiny organic matter, colloid, heavy metals and harmful matter, and adjust the PH-value to meet the demand of human body preferably.

### 3. NF MEMBRANE WATER FILTER

This filter is for use to remove large molecule of organic matter, colloid, bacteria and harmful matter by adopting NF technology, filtration precision of 20-100nm. REVERSE OSMOSIS MEMBRANE IS AVAILABLE

### 4. MINERALIZING ACTIVATION WATER FILTER

This filter is for use to remove tiny organic matter ,heavy metals ,harmful impurities for a step further ,and remain long-term sterilization ,bacteriostasis . In addition, far infrared mineralizing stones provide more than 20 kinds of mineral, which are necessary for human body

Origin of water:	Tap water
Filtration speed of water:	(0.1~0.6)L/min
Rated water pressure:	(0.1~0.8) Mpa
Volume of water tank:	5.5L
Longevity of filters:	10m3(1#, 2#, 4#), 5m3(3#)
Rated power:	220V/110V
Rated frequency:	50Hz/60Hz
Heating power:	500W
Cooling power:	65W-85W
Heating capability:	>=90jC5.0L/h
Cooling capability :	<=10jC 1.5L/h(compressor cooling )
	<=15jC1.0L/h (electrical cooling )
