

Whole House Water Filters,House Water Filters manufacturer

Our whole house water filters remove chlorine and other chemical tastes/odors plus dirt/sediments, making water cleaner, clearer, and safer for your whole house. In addition, they also protect your appliances, fixtures and pipelines.

These premium whole house inline water filters are usually placed in the main water line entering the home, Whole house water filters can be installed by a homeowner who is mechanically inclined, or if you prefer, by any licensed plumber. The system is equipped with a pressure release button to inform you when filter replacement is required. The frequency of filter replacements will depend on the amount of contaminants in your incoming water supply ,Of course, generally have capacities to filter 10,000 - 100,000 gallons of water before you have to change the cartridge.

A whole house water filter system is comprised of at least one filter housing, at least one filter cartridge, and a spanner wrench (included w/ housing).

We offer whole house water filter housings and filter cartridges that you can mix and match yourself. You can even connect 2 housings in series to form a unique system designed for your situation. For example, first stage is sediment filtration, then followed by a carbon or iron removal filter in the second housing as a second stage filtration.
